	Revolution	$		
	Bravecto	$		
		TOTAL FELINE		

I verify that the above information is true to the best of my knowledge. I understand that if my pet has a reaction to the vaccines given today I am responsible for finding a veterinarian to provide care for my pet at my own expense. I am aware that vaccines can cause sarcomas (malignant tumors) in cats.

Clinic Veterinarian Date

ADVERSE REACTIONS TO VACCINES:

Pets commonly experience slight soreness and lethargy after vaccinations. Anything more serious than this should be considered a possible reaction to the vaccines and you should seek prompt medical attention.

Please watch your pet carefully for any of the following signs for 48 hours after vaccinations. ** Trouble breathing ** Not eating or drinking ** Vomiting or diarrhea ** Extreme lethargy ** Swelling of face, especially around the eyes or muzzle ** Hives

If you think your pet is having a vaccine reaction you should contact a local veterinarian or emergency clinic immediately. Vaccine reactions are usually mild and simply require anti-inflammatory injections. However, severe reactions can potentially be fatal.

I am aware of the possible adverse reactions to the vaccines. (Initial) _____
